

### 3.6 Logical Framework Matrix

At action level, the indicative log frame should have a maximum of 10 expected results (Impact/Outcome(s)/Output(s)). It constitutes the basis for the monitoring, reporting and evaluation of the intervention.

On the basis of this log frame matrix, a more detailed log frame (or several) may be developed at contracting stage. In case baselines and targets are not available for the action, they should be informed for each indicator at signature of the contract(s) linked to this AD, or in the first progress report at the latest. New columns may be added to set intermediary targets (milestones) for the Output and Outcome indicators whenever it is relevant.

- At inception, the first progress report should include the complete log frame (e.g. including baselines/targets).
- Progress reports should provide an updated log frame with current values for each indicator.
- The final report should enclose the log frame with baseline and final values for each indicator.

The indicative logical framework matrix may evolve during the lifetime of the action depending on the different implementation modalities of this action.

The activities, the expected Outputs and related indicators, targets and baselines included in the log frame matrix may be updated during the implementation of the action, no amendment being required to the Financing Decision.
